EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Dana Gronbeck on October 29, 2008.

The application has been amended as follows:

2. Claim 9 is cancelled.

REASONS FOR ALLOWANCE

3. The following is an examiner's statement of reasons for allowance.

The closest cited prior art of record, US 6,790,914, US 2003/0119961 and US 2002/0119961, fail to fairly teach or suggest, even in view of each other, the polarizing plate which comprises a polarizing film and a protection layer formed of an unstretched transparent film comprising the specific cyclic olefin-based addition polymer which is a homopolymer of the compound represented by Applicant's Chemical Formula 1, or a copolymer of two or more of the compounds represented by Applicant's Chemical Formula 1, where the transparent film has a retardation value in the thickness direction, R_{th} , that is within the range of 60 to 1000 nm, as calculated by Applicant's equation 1, where $n_x \approx n_y > n_z$. It is noted that the phrase "copolymer of two or more kinds of the compounds represented by Applicant's Chemical Formula 1" means that the copolymer is formed of two or more of the compounds represented by Applicant's Chemical Formula 1 in the context of Applicant's disclosure (page 11, lines 9-15) which is translated from the foreign priority document KR 10-2003-0007474. While US 6,790,914 and US 2003/0119961 both teach a cyclic olefin-based addition polymer which can be a copolymer of a compound represented by Chemical Formula 1 of Applicant, they teach that the silyl group-containing compound is essential, and thus fail to teach a homopolymer of a compound represented by Chemical Formula 1 of Applicant, or a copolymer of two or more kinds of the compounds represented by Chemical Formula 1 of Applicant. Furthermore, both references also fail to teach the

specific optical retardation properties of the unstretched film. See Applicant's arguments in the remarks section dated 08/15/08.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
